***Election/Restrictions***

1. Applicant's election without traverse of Group I in the reply filed on 11-9-06 is acknowledged.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 1-3,5-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claims set forth 15-30% porosity where it is defined on the amount of silicon present in the body. The specification teaches bodies having high densities such as greater than 2.85 g/cm<sup>3</sup> where this amount of porosity would not be likely. It would be expected that the silicon would react with the carbon and form silicon carbide and filling any pores. Furthermore, the specification at page 25 appears to teach porosity is unfavorable. Also it cannot be seen how the porosity may be as high as 15-30% when the material used to factor the porosity must be limited to 4 volume %.

Claim 1, "the porosity" lacks antecedent basis.

Claim 5, "the bending strength" lacks antecedent basis.

***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

Art Unit: 1755

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 1-3,5-7 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Odaka et al WO 200007959 (Equivalent to US 6,695,984).

Odaka et al (for convenience the US document is being referred to) teach a sintered silicon nitride body having a nitrogen content greater than 150 ppm and SiC impurity content less than 0.5 ppm and silicon less than 1 ppm (column 7, lines 60-65, column 9, lines 60-64). The body is formed by reacting elemental silicon with free carbon in the body. In view of the similarities in the process limitations, the product would be expected to have similar silicon contents. The body also has a bending strength of greater than 243 MPa, see table 1.

It is well settled that when a claimed composition appears to be substantially the same as a composition disclosed in the prior art, the burden is properly upon the applicant to prove by way of tangible evidence that the prior art composition does not necessarily possess characteristics attributed to the CLAIMED composition. In re Spada, 911 F.2d 705, 15 USPQ2d 1655 (Fed. Circ. 1990); In re Fitzgerald, 619 F.2d 67, 205 USPQ 594 (CCPA 1980); In re Swinehart, 439 F.2d 2109, 169 USPQ 226 (CCPA 1971).

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
